CINDRALITE · LUCERITE · IN DEVELOPMENT

Two coins of the project: what is ready and what is not

Product deck

Private CNDT and public LUCR

CNDT

- A private coin.
- Its own network on the Zcash engine.

LUCR

- A public coin.
- Solana, Ethereum and TRON.

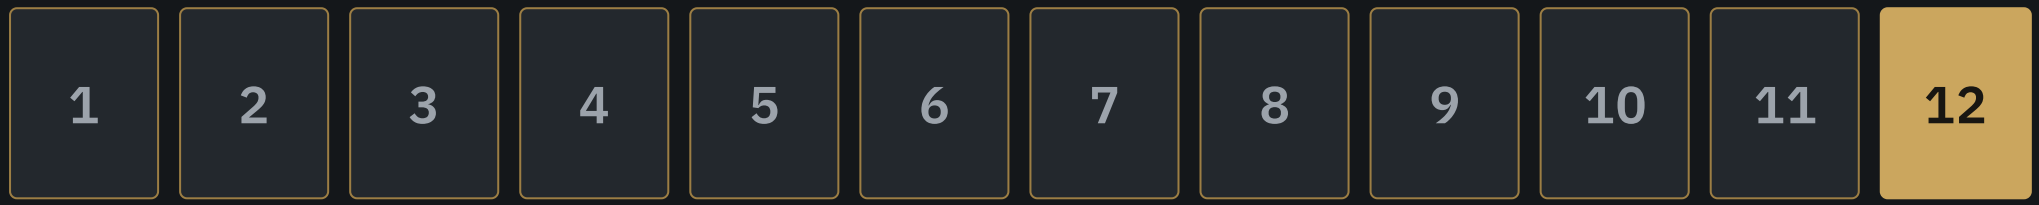

CNDT: its own network on the Zcash engine

21,000,000
coins in total

8
decimal places

Zebra 7.0.0
network engine

A block every 25 seconds, final after 12

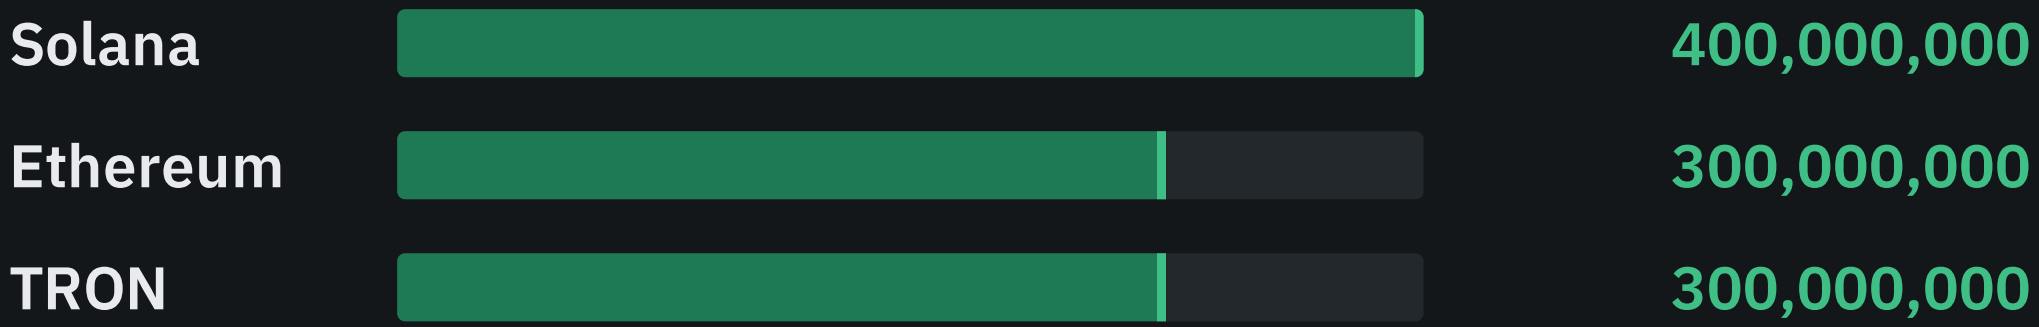

About 5 minutes while the network is closed.

LUCR contract: no issuer rights

The contract has no

- owner or roles
- minting of new coins
- pause of transfers
- blacklists or whitelists
- transfer fee
- proxy or code upgrade

One issue in each network, no bridge

In total 1,000,000,000 LUCR, 9 decimals each. So far only in local development networks.

Wallet: the keys stay on your device

01

Write 24 words

02

Check your copy

03

Send coins

No account

Only through Tor

Test builds

The hub takes coins to an account

01

Coin on the account

02

Exchange for hub currency

03

Play and purchases

04

Withdrawal by approved request

Code only: no players, no payments.

What is ready and what is not

In the code

- CNDT stand
- LUCR contract (local)
- Wallet builds

Missing

- Public issue
- Price, listing
- Legal review
- Independent audit

Open the coin page

Read the facts.

Check them against the sources.

Decide for yourself.
